

GANESH KONDETI

Trainee Engineer | DevOps, Linux Administration & Cloud Monitoring

Hyderabad, India | +91 6281839272 | ganesh.kondeti18@gmail.com | github.com/ganeshkondeti18-lang | linkedin.com/in/ganesh-kondeti-7198903b1

PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student (graduating 2026) with hands-on project experience across Linux administration, shell scripting, containerized deployments, and cloud monitoring. Comfortable working across the full operations lifecycle — provisioning and hardening Linux servers, automating routine tasks with shell scripts, configuring AWS CloudWatch alarms, and building Prometheus/Grafana dashboards for real-time system health visibility. Solid grounding in core networking concepts (OSI model, TCP/IP) and cloud infrastructure (AWS). Quick learner, comfortable picking up new monitoring and administration tools, and open to working in a 24x7, shift-based support environment as a Trainee Engineer.

TECHNICAL SKILLS

Operating Systems: Linux Administration (RHEL/Ubuntu), Shell Scripting, Server Hardening & Configuration

Networking Fundamentals: OSI Model, TCP/IP, DNS basics

Monitoring & Observability: AWS CloudWatch (alarms, notifications), Prometheus, Grafana

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, VPC, IAM, CloudWatch, DynamoDB, EKS)

Containerization & Microservices: Docker (multi-stage builds), Kubernetes (rolling updates, rollbacks, cluster troubleshooting)

CI/CD & Version Control: Jenkins, Git, GitHub (GitHub-triggered pipelines)

Infrastructure as Code / Automation: Terraform, Ansible, Shell Scripting

TECHNICAL PROJECTS

Centralized Cloud Monitoring & Observability Implementation *Personal Project | Prometheus, Grafana, AWS CloudWatch*

- Implemented metrics collection using Prometheus and built Grafana dashboards for real-time visualization of container and node-level resource usage.
- Configured AWS CloudWatch alarms and notifications to track system health and speed up detection of cluster-level incidents — the kind of proactive monitoring workflow used with tools like ManageEngine, OpManager, and New Relic.

Infrastructure as Code (IaC) & Server Configuration Automation *Personal Project | Terraform, Ansible, AWS, Bash*

- Provisioned a reproducible, secure multi-tier cloud infrastructure on AWS using Terraform, with an S3 remote backend and DynamoDB state locking for safe, repeatable execution.
- Developed reusable Ansible playbooks and custom Shell scripts for baseline Linux environment hardening and configuration, cutting manual server setup time by approximately 45%.

CI/CD Pipeline for Containerized Microservices Deployment *Personal Project | Git, GitHub, Jenkins, Docker, Kubernetes*

- Built an automated CI/CD pipeline using Jenkins, triggered by GitHub commits, to build, test, and deploy containerized applications.
- Created multi-stage Dockerfiles and managed application deployment on Kubernetes, including rolling updates and rollbacks.
- Diagnosed and resolved Linux-level cluster issues including CrashLoopBackOff and ImagePullBackOff, achieving a stable, repeatable deployment process.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering 2022 - 2026

PRIST University, Thanjavur | CGPA: 8.0/10

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (In Progress)
- Docker & Kubernetes Essentials
- Terraform Associate Training
